

Chemical Injection Metering Valve - SkoFlo Industries, Inc

Manufacturer: SkoFlo Industries, Inc

Model: 500

Description: This industrial component is a pressure-independent chemical injection metering valve manufactured by SkoFlo Industries, Inc., specifically Model 500 with serial number 2804, engineered for demanding oil, gas, and offshore subsea infrastructure. The unit is rated for an exceptionally high maximum working pressure of 10,000 PSI (approximately 690 bar) and utilizes specialized pressure-compensated technology under US Patent Number 4893649 to maintain a constant, precise chemical flow rate despite fluctuating upstream or downstream line pressures. The physical construction consists of a robust, heavy-duty stainless steel or corrosion-resistant alloy cylinder wrapped in protective tape, featuring a single threaded connection port at the top cap secured by Allen bolts, and a prominent internal hex socket at the bottom base designed for manual flow rate calibration and adjustments.

Serial No: 2804

Stock: 1

External ID: 4007394

Internal ID: 12628

Weight [kg]: 10
