

Wastegate Turbocharger - garret

Manufacturer: garret

Model: GT3571A

Description: This product is a remanufactured Garrett turbocharger with a mechanical wastegate control, rebuilt and certified by Navistar, Inc. under their official "ReNewed" program for heavy-duty industrial engines under part number F4307131R1. The component functions by utilizing exhaust gas energy to force extra air into the combustion chamber, which increases the power output of the associated diesel engine. On an oil tanker, this specific type of turbocharger is typically used on auxiliary engines, emergency generators, or cargo pump stations where high reliability is required during continuous operation, and the mechanical wastegate actuator on the side ensures that the maximum boost pressure is precisely regulated to protect the engine from overloading.

Stock: 1

External ID: 4007329

Internal ID: 12627

Dimension (L x B x H) [m]: 0,29x0,25x0,23

Weight [kg]: 9
